

## Selecting the Mount

Translume precision pinhole can be purchased mounted or unmounted.

Unmounted Pinhole: Translume's precision pinholes are made of 250-micron thick fused silica, as such they are mechanically robust. They can be used unmounted for many applications.

Mounted Pinhole: Our precision pinholes can be purchased mounted in a black anodized aluminum housing.

### Special Mounts

Other mounts are available on a special order basis.
